# FACT SHEET

**State Superfund Program**

**Former IBM Endicott Site  
Operable Unit 07  
1701 North Street  
Endicott, NY 13760**

**April 2018**

**SITE No. 704014  
NYSDEC REGION 7**

## Record of Decision Available for Public Review

The New York State Department of Environmental Conservation (NYSDEC), working cooperatively with the New York State Department of Health (NYSDOH), announces the availability of the Record of Decision (ROD) for the former IBM Endicott Site Operable Unit 07 (OU7), which is being cleaned up under New York State's Inactive Hazardous Waste Disposal Site Remedial Program (Superfund). The ROD is available for your review at the document repositories identified on the left side of this page.

On March 8, 2018 NYSDEC held a public meeting presenting the Proposed Remedial Action Plan (PRAP) for OU7 of the Site. The comments received at this meeting and during the public comment period February 24, 2018 through March 26, 2018, along with the administrative record, were considered in preparing the final ROD for the site. The ROD presents the remedy selected to address contamination related to the site and the rationale for the chosen remedy.

**Summary of the Selected Remedy:**

Groundwater contamination (remaining after active remediation) will be addressed with monitored natural attenuation (MNA). Groundwater will be monitored for site related contamination. It is anticipated that contamination will decrease by an order of magnitude in a reasonable period of 10 years. Reports of the attenuation will be provided at 5 and 10 years, and active remediation will be proposed if it appears that natural processes alone will not address the contamination associated with OU7 and if determined necessary by the Department. The contingency remedial action will depend on the information collected, but it is currently anticipated that a Remedial Site Optimization to evaluate the potential for further source control for sources in OU7 would be the expected contingency remedial action.

The selected remedy includes the following elements:

- Institutional Control
- Site Management Plan
- As a contingency remedial action, a Remedial Site Optimization will be performed to evaluate the potential for further source control for sources in Operable Unit 07 if determined necessary by the Department.
- A Monitoring Plan to assess the performance and effectiveness of the remedy.

# INACTIVE HAZARDOUS WASTE DISPOSAL SITE REMEDIAL PROGRAM

## Next Steps:

Additional fact sheets will be provided to keep you informed of the project's progress.

## State Superfund Program Overview:

The Superfund Program is the State's program for identifying, investigating and cleaning up sites where disposal of hazardous waste is known. The Superfund process begins with the identification of a possible source of hazardous waste related contamination at a property. The identification of a site can come from many different places, such as the local county health department, a concerned citizen, or the investigation of a nearby site. Once identified these sites go through a process of investigations, evaluation, cleanup and monitoring.

For more information about the Superfund, visit:

*We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.*

### Receive Site Fact Sheets by Email

Have site information such as this fact sheet sent right to your email inbox. NYSDEC invites you to sign up with one or more contaminated sites county email listservs available at the following web page:

[www.dec.ny.gov/chemical/61092.html](http://www.dec.ny.gov/chemical/61092.html)

It's quick, it's free, and it will help keep you better informed. As a listserv member, you will periodically receive site-related information/ announcements for all contaminated sites in the county(ies) you select.

Note: Please disregard if you already have signed up and received this fact sheet electronically.
